Description

TESND60-F3 are the series of isolated DC/DC converters meant to work under both heavy electrical and environmental conditions. **Up to 60 Watts** of power packed in **48x33x11 (mm) case** offers you flexibility of wide input range with both extremely low and high case temperatures of **-40° to +110° C**. The units feature a system of over-current and short-circuit protection and over-voltage protection. Standard functions include remote on/off, energy-saving zero-load operation. The units maintain high efficiency across broad load range. Its versatility allows you to implement the converter in a vast number of industrial applications, supplying capacitive, constant-power and impulse load.

Maximum output power based on case temperature

—— Standard maximum power output based on case temperature.

- - - Possible range of output power for customized product.

Note:

Before attaching a heatsink, the product label on converter has to be removed for optimal performance. Thermal paste or a thermal pad must be placed between the unit surface and a heatsink for quality contact. Please contact us for choosing these components and their application.

For volume orders we can supply the converters with heatsink already mounted.

For modeling optimal heatsink and its delivery, with goal of providing allowed case temperatures, please contact us directly at aeps@aeps-group.cz.
